

Sophisticated Equipment, Speedy Results

If your pet gets sick or has an emergency, we can run lab tests to get quick results so doctors have an accurate diagnosis and can begin treatment immediately. We also perform intestinal parasite tests, allergy testing, blood counts, chemistry profiles, urinalysis, cytology, heartworm tests and feline retrovirus testing. Our doctors use the same sophisticated equipment as human hospitals:

- **Ultrasound**—Our hospital provides abdominal and cardiac ultrasound services to diagnose various medical conditions.
- **Radiology**—We offer dental and full body x-ray services.
- **Electrocardiogram (EKG)**—We can monitor your pet's heart function during all surgeries and also can diagnose heart murmurs or other conditions.
- **Dental x-rays**—Dental x-rays identify the condition of teeth and the jawbone, broken or small fractures in teeth or a diseased tooth that may need to be surgically removed.

Welcome to Our Family

Since 1999, Winslow Animal Hospital has provided quality healthcare for pets. We take pride in offering the latest medical expertise and equipment along with personalized service. Our medical team cares for your pets as if they were our own. We strive to extend and enhance the quality of pets' lives through delivering high-quality and cutting-edge medical, surgical and dental services in a friendly and compassionate environment. Our doctors have advanced training in orthopedic surgery and dentistry.

Preventive Care for Optimal Wellness

Winslow Animal Hospital takes a proactive approach to wellness. Your pet's wellness visit includes a comprehensive physical exam, an oral exam with grading of dental disease, nutrition counseling, an intestinal parasite test, an annual heartworm test for dogs and year-round protection from fleas, ticks and heartworms. Senior pets receive twice-a-year wellness exams, blood tests and urinalysis to establish a baseline and detect changes early. This level of preventive care could add years to your pet's life.

Emergency & Critical Care

Our experienced doctors and staff provide life-saving care and surgery during regular business hours. Should your pet need immediate medical care after hours, we refer patients to several local fully staffed emergency clinics.

Proactive Pain Management

Your pet will receive medication to relieve pain before, during and after any procedure that may cause discomfort. Our doctors have been trained in the latest pain-management techniques and seek ongoing continuing education.

Skilled Soft-Tissue and Orthopedic Surgeries

From spays and neuters to emergency surgery, our doctors provide a skilled hand and tender touch. Our soft-tissue surgical services include spays, neuters, lump removal, abdominal surgery, hernia repair, eye surgery and other procedures.

All surgery patients receive preanesthetic blood tests to check the health of organs, as well as an IV catheter and fluids for safety and hydration. During surgery, we monitor your pet's heart rate, blood pressure level of oxygen in the blood and temperature. In addition to sophisticated monitoring equipment, our certified veterinary technicians provide watchful eyes and caring touches while assisting doctors.

Dr. Philippe Coudrai had advanced training in orthopedic and dental surgeries. Performing more than 2,000 orthopedic surgeries for 45 area hospitals, he brings expertise in procedures such as cruciate ligament repair and patellar luxation repair, long bone and pelvic fracture repair, and joint stabilization and reconstruction techniques. Dr. Coudrai is certified to take PennHip x-rays to detect hip dysplasia in puppies as young as 4 months of age and is a member of the Veterinary Orthopedic Society.

Providing the Latest Dental Services

Because 85% of pets age 4 and older have dental disease, we want to prevent infection and the spread of harmful bacteria through the mouth into the blood stream and organs such as the heart, liver, lungs and kidneys. A doctor will perform a thorough oral exam while your pet is under anesthesia, measuring gingival pockets to assess overall oral health. Our technicians perform professional dental cleanings with an ultrasonic scaler, polish teeth and provide fluoride treatment. Dental x-rays diagnose the condition of your pet's teeth and jawbone. Our trained and skilled veterinarians perform oral surgery to extract diseased or broken teeth. You'll receive before-and-after photos of your pet's professional dental cleaning and advice on brushing, diet and easy-to-use dental products.

Advanced Dental Surgeries

Our veterinarians have completed continuing-education courses at the Animal and Dental Training Center. This advanced training lets us help patients that need surgical tooth extraction, root canals and broken tooth repair. Besides providing sophisticated dental services for our hospital's patients, many area veterinarians refer advanced dental cases to us based on our state-of-the-art dental equipment, ongoing training and respected reputation.
